PROFILE

Fullstack developer with a background as a licensed pharmacist, specialized in .NET, C#, and Azure cloud development. I have hands-on experience with building, testing and deploying APIs and fullstack solutions as well as automating cloud infrastructure using Bicep, Terraform and CI/CD pipelines in Azure DevOps. I thoroughly enjoy development and I have a good grasp on system architecture and can navigate bottlenecks in complex solutions. I'm comfortable owning work independently, collaborating cross-functionally, and have acted as the technical point of contact for developers and architects. I like to spend my free time on hobbies like swimming, reading, dancing Zumba, editing videos, develop my own projects and solving big puzzles.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET, Blazor, JavaScript, HTML, CSS, Python

Cloud: Azure (EntraID, API Management, Bicep, Terraform, Private Endpoints, Function Apps, Container Apps, Web Apps, Container Registry, UAMI, IAM/RBAC, Key Vault, Logic Apps, Storage Account, Virtual Network), VPS, Caddy, DNS

Databases: Microsoft SQL Server, Azure SQL, MySQL, CosmosDB, SQLite, MongoDB Atlas

Testing: XUnit, Playwright, Integration tests, API-tests, Smoke-tests

Tools: Docker, CI/CD, YAML, Bash, Powershell, Git, Agile, Scrum, Github, Github Actions, Azure DevOps, Docker compose

Other: JWT (OAuth2, EasyAuth), JSON, XML, Microsoft (Word, Excel, PowerPoint, Teams), Visual Studio, VS Code, SBOM

WORK EXPERIENCE

Göteborg Energi — Software and Cloud Developer

September 2025 – September 2026

Internship that into immediate employment; worked independently from start

- **Built and deployed a .NET API for “Mina sidor”** (100,000+ logged-in users) with a colleague, from proof of concept to production in 1 month, with full test coverage (XUnit, integration, API, and smoke tests).
- Deployed the API to Azure Container Apps with IP-access-restrictions and integrated the calls through API Management, fully secured with Azure EntraID authentication.
- **Developed a fullstack forecasting tool** (Blazor, .NET API, Azure SQL) that automates product demand forecasting, cutting processing time from 2 full working days to about 20 minutes for engineers. This project replaced the previous manual process of updating Excel-files of 250+ columns per product. The aggregated data from the new tool enabled easier import into Power BI for visualization and cut down 35+ manual data-cell handling steps to 5. Integrated two external sources from Göteborg Stads SBK into the tool for fetching and versioning data.
- Configured Web Apps with container images and implemented EasyAuth and virtual network with private endpoints for database access, securing 58 endpoints from public exposure in accordance with the company's regulatory framework.
- Automated CI/CD for frequent releases to Azure with YAML pipelines for both the API- and fullstack project.
- **Built three automation pipelines for SBOM** generation, CSV to SQL conversion, and Azure Function App deployment.

Apoteket — Pharmacist

June 2023 – June 2026

Fixed-term employment, later hourly alongside studies

- Handled prescription dispensing and customer consultation for up to 100 customers and 300 prescriptions per shift (shifts up to 10 hours) across several pharmacies, including Kungälv and Backaplan.
- Served as the go-to contact for digital systems among colleagues; onboarded and trained new staff.
- Designed and introduced a package-labeling system that streamlined the lookup process for the entire team.
- Won three internal sales competitions among colleagues.

Transferable Work Experience

June 2016 – August 2022

City Interviewer (HKL Research) · Customer Service for Klarna (Foundever/Sykes) · Technical Support Advisor, iOS

(Concentrix/Webhelp) · Substitute Teacher (Humly) · Childcare Assistant · Security Guard

Summer and part-time roles in customer service, technical support, and education; built early experience in customer contact, problem-solving, and technical systems ahead of the career change to IT.

EDUCATION

IT-Högskolan — .NET Cloud Developer

August 2024 – May 2026

- Graduated with distinction (VG/highest grade) in all courses.
- Thesis at Göteborg Energi: “Comparing Terraform and Bicep for Azure Container Apps”: led to adopting Bicep as its standard tool; also built a Terraform template as a reference for future reference.
- Led a full-day workshop on .NET and Azure for incoming students.
- Placed 2nd in a 4-week summer hackathon (built a cost-splitting app FairSplit) and won a separate user-interface design competition, in a class of 40 students.

Göteborgs Universitet — Master of Science in Pharmacy

August 2016 – June 2023

- Master's thesis: “Potential for Partial Agonism at GPC-Receptors,” Department of Neuroscience and Physiology.
- Completed 6 months of clinical placement (VFU) in community pharmacies.
